

Medical SOAP Report

Name	johnson
Age	35
Gender	Male
Patient ID	A10234
Report Date	12-12-2025

Subjective

- Patient reports having a fever.
- No other symptoms or concerns mentioned.

Objective

- Patient self-reports fever; no objective measurements provided.

Assessment

- Viral upper respiratory infection – High likelihood (common cause of fever).
- Bacterial infection (e.g., pneumonia) – Moderate likelihood (fever alone insufficient to rule out).
- Heat exhaustion – Low likelihood (no mention of heat exposure or dehydration).

Plan

- Rest and stay hydrated.
- Monitor temperature daily; seek care if $>38.3^{\circ}\text{C}$ (101°F) for >48 hrs or if new symptoms develop.
- Over-the-counter antipyretic (acetaminophen or ibuprofen) as needed.
- Red flag symptoms: persistent cough, shortness of breath, chest pain, severe headache, rash, confusion.
- Follow-up: If fever persists beyond 72 hrs or worsens, schedule a medical evaluation.
