

Medical SOAP Report

Name	johnson
Age	35
Gender	Male
Patient ID	A10234
Report Date	2025-12-12 21:43:29

Subjective

- Fever for 3 days (peak 102°F/38.9°C)
- Headache
- Dry cough
- Chest pain associated with cough

Objective

- Persistent high-grade fever documented at 102°F
- Symptoms lasting 72 hours

Assessment

- 1. Influenza: High likelihood - acute fever, headache, cough
- 2. Pneumonia: Moderate likelihood - chest pain with persistent cough/fever
- 3. Viral URI: Moderate likelihood - dry cough and systemic symptoms

Plan

- Supportive care: Rest, hydration, acetaminophen for fever/headache
- Home instructions: Isolate to prevent transmission, avoid exertion
- Monitoring: Track temperature hourly; log cough frequency
- Red flags: Seek ER if chest pain worsens, SOB develops, or confusion occurs
- Follow-up: Urgent provider visit within 24 hours for possible testing
