

Medical SOAP Report

Name	kaladheen
Age	28
Gender	Male
Patient ID	A10266
Report Date	2025-12-16 15:00:07

Subjective

- Facial pimples
- Facial rashes

Objective

- No observable findings documented
- No vital signs or diagnostic results provided

Assessment

- Acne vulgaris: Moderate likelihood (pimples suggest follicular occlusion/inflammation)
- Contact dermatitis: Low likelihood (rashes could indicate irritant/allergic reaction without exposure history)
- Possible early rosacea: Low likelihood (facial inflammation without vascular features described)

Plan

- Supportive care: Use gentle, fragrance-free cleansers; avoid picking lesions
- Home instructions: Apply over-the-counter 2.5% benzoylperoxide gel for discomfort; avoid heat/exercise post-cleansing
- Monitoring: Track lesion changes for 72 hours; note new symptoms (e.g., fever, swelling)
- Red flags: Seek urgent care for breathing difficulties, severe swelling, or pus-filled lesions
- Follow-up: Schedule dermatology consult if no improvement in 1 week
