

Medical SOAP Report

Name	johnson
Age	35
Gender	Male
Patient ID	A10294
Report Date	2025-12-14 15:57:26

Subjective

- Fever (3 days duration)
- Peak temperature: 102°F (38.9°C)

Objective

- Fever duration: 3 days
- Measured temperature: 102°F

Assessment

- Viral URI/influenza: Moderate likelihood - Common cause of acute fever with these parameters
- Bacterial sinusitis: Moderate likelihood - Persistent fever suggests possible bacterial complication
- Early sepsis: Low likelihood - No systemic inflammatory signs (hypotension, tachycardia) reported

Plan

- Supportive care: Acetaminophen/ibuprofen PRN for fever (if medically approved)
- Home instructions: Maintain hydration, rest in cool environment
- Monitoring: Track temperature q4-6h, watch for rash or dehydration signs
- Red flags: Seek urgent care for temp >103°F, confusion, dyspnea, or persistent vomiting
- Follow-up: Contact healthcare provider within 24 hours for possible diagnostic evaluation
